

Proscend Communications Announces The Availability Of VLAN Features for G.shdsl Routers to Enhance Quality-of-Service Of Voice-over-IP

HSINCHU, TAIWAN – January 28, 2004 – Proscend Communications Inc. today announced the availability of VLAN features for G.shdsl Routers to enhance Quality-of-Service (QoS) of Voice-over-IP (VoIP). Instead of concurrently sharing common bandwidth of up to 2.3Mbps via 2-wire copper line for data communication of different applications like file transfer, voice packet communication; the VLAN features of G.shdsl Routers provide the ability for network management administrators to specify specific one out of eight Private Virtual Channels (PVC) of the WAN port of G.shdsl Routers Only for VoIP server to enhance QoS of voice communication.

G.shdsl Routers of Proscend Communications have been mainly installed for the data communication application of Ethernet-over-SHDSL (LAN Extension). “By configuring CISCO Switching Routers which support VLAN features with Proscend 5111 one-port G.shdsl Router at central office site and Proscend 5211 four-port G.shdsl Router at client sites for both data and voice communication, it becomes a most cost effective configuration with superior voice communication quality for industries like Banking and Insurance to serve public users” said Eric In, Marketing & Sales Director of Proscend Communications.

Availability

The G.shdsl Routers with VLAN features of Proscend Communications are now in production. For sample evaluation, please contact Eric In at ericin@proscend.com.
